AND RESILIENCE]
PLAN**

Peter Balcirak, May 2026
Identity Engineer

What is the multi-affiliation or multi-contract management about?

Academia as a typical environment

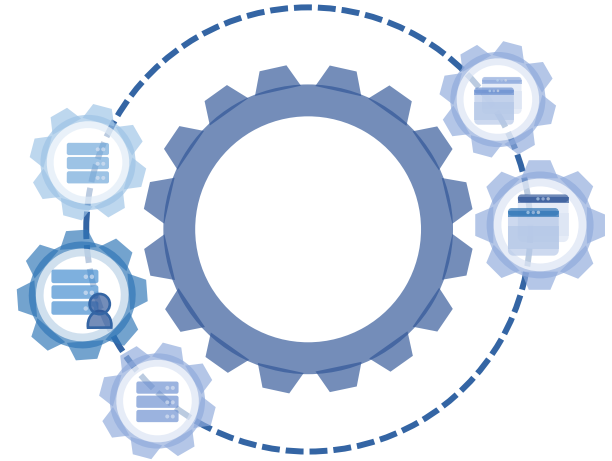

- Example scenarios
 - Students helping with teaching
 - Students having a part time job in laboratories
 - Employees who can attend some of the courses
- And many more...

Is it only connected to academia?

Corporate environment

- Multi-contract use-cases more and more common
- Examples
 - People working under multiple contracts on multiple projects within the same organization
 - Core employees having also a contract in the same organization
 - Board members being also common employees
- Those are some of the reasons why is it vital to understand the concept.

What is the challenge?

Typical challenges

- Hidden problems not visible in the beginning
 - What to do with different data in different source systems?
 - How to choose the primary department?
 - How to properly handle user lifecycle?
 - What about manual intervention?
 - How to perform micro-certifications?
- This is just a small subset of challenges...

Do organizations handle it properly?

Common approaches

- Perhaps you have already encountered some of these challenges and did not know how to solve it.
- Samples of the solutions
 - Multiple accounts for the same person
 - Bunch of scripts and a database for joining the accounts
 - Manual management of affiliations
 - Not handling the proper lifecycle at all

How can midPoint help you?

Demo Time!

Home is behind, the world ahead, and there are many paths to tread.
(Bilbo Baggins)
